

# The Dangers of Fast Fashion Support: A Health and Environmental Analysis

---

Summer Turnberg  
Biomedical Sciences  
Faculty Advisor: Dr. Jutta Heller  
University of Washington Tacoma campus

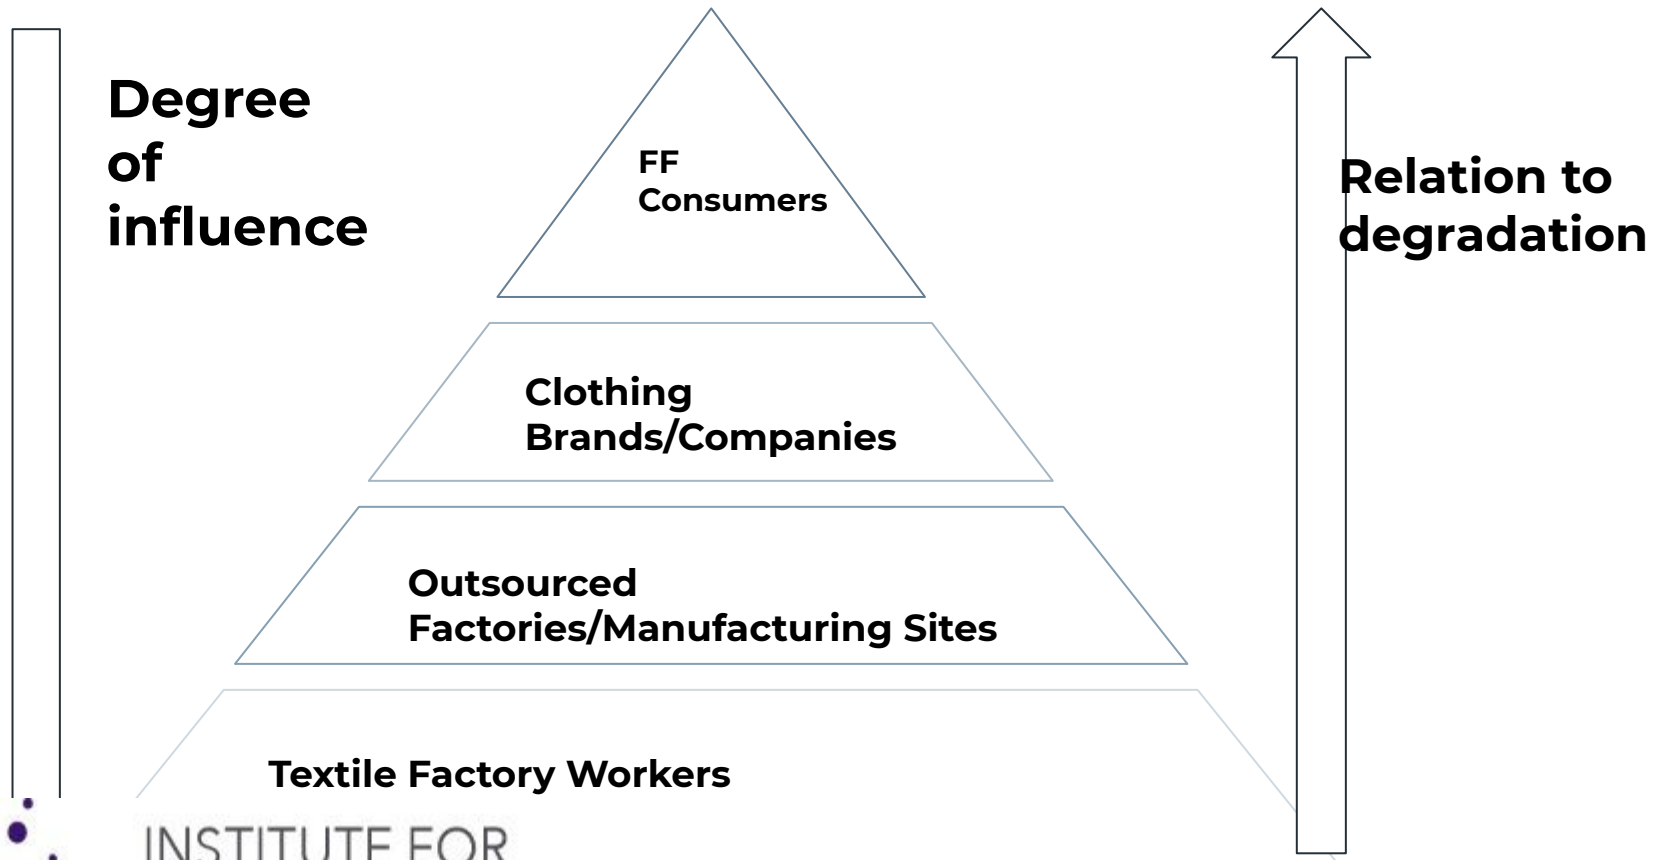

# Context

---

- There are cancerous and non-cancerous ties to textile manufacturing
- Large economic gain from the current systems in place
- Environmental degradations pose a threat for the future for everyone
- **Globalization fuels the severity of fast fashion.**

HOW DO THE NEEDS OF THOSE IN AREAS OF INFLUENCE AFFECT THE HEALTH OF THOSE IN AREAS OF PRODUCTION?

# Global Framework

# Methodology

---

- **Compile case studies directly from textile workers**
- **Research pollution emitted and the effects on human health**
- **Evaluate the economic dependence**
- **Lay out a globalization framework**
- **Research psychology to change the systems in place**

# Results

---

- **Bladder cancer is one of the most prevalent long-term consequences**
- **Lung diseases are prevalent despite endotoxin presence**
- **Environmental degradation poses similar threats**
- **More than just workers are at risk due to buyers demand**

# Solution

---

- Create clothing tags with more information
- Ensure the flag of the main country of origin
- Include specific city or township of production
- Make legislation clear
