

### **Internship Abstract**

Name: Kobe Middlebrooks

Project Title: Student Media Service Technician

Company: University of Washington Tacoma

Industry Sponsor: Paul Lovelady

497 Instructor: DC Grant

During my internship at the University of Washington Tacoma, I got the great opportunity to work with the Media Service Team. This team is responsible for all classroom equipment and assistance with events. My project was running the A/V equipment at student events and assure that all classroom A/V equipment was working correctly to minimize as much classroom disruption as possible. I had the opportunity to learn about many new systems that I didn't know about before, including multiple Extron systems. In fact, I obtain 8 Extron certifications during my internship. Those being Wireless Principles, USB Principles, Audio Principles, Connectivity Principles, Control Principles, Video Principles, Streaming Principles and Fiber Principles. I now know how many of these systems and how to work with and troubleshoot them. Many of these certifications were easy to obtain after some of the course I had taken at the University of Washington Tacoma.
