

Name: Emmiliia Fedina

Project Title: DUNE Dashboard

Company: Reverse

Industry Sponsor: Tomasz Wojewoda

497 Instructor: Monika Sobolewska

For my internship, I have worked as a software engineer at Reverse, a start-up cryptocurrency company. During the course of the internship, I had exposure to cryptocurrency, SQL, DUNE XYZ (tools to query, extract, and visualize data), and Ethereum (open-source, programmable blockchain platform), all of which added to my arsenal of skills. I also greatly improved on my communication and technical skills. There was an immense amount of knowledge that I acquired in a variety of computer science subjects from learning a new language to creating my own queries and a dashboard. As a result, I have learned what it means to be a crypto developer and how to deal with various steps of crypto analytics.
