Name: Andrew Dibble
Project Title: Web Portal Development
Company: Avanade
Industry Sponsor: Mendelsshon Porcare
497 Instructor: Monika Sobolewska

This summer, I was a full-stack developer intern at Avanade, which is a consulting company owned by Microsoft and Accenture. I developed a web portal for internal employees working on a large customer project. This portal will be a centralized area for Avanade employees to find, learn, and share information. I used React and jQuery JavaScript libraries, as well as the Bootstrap CSS framework to create this portal. I had never worked with any of these languages before, so I learned a lot about JavaScript and why it is so useful. Additionally, I learned and saw the software development lifecycle firsthand, which has allowed me to become a more experienced programmer. Finally, I gained valuable exposure to a billion-dollar company and what business etiquette looks like on a day-to-day basis.
