## Abstract

My internship was with World Wide Technology, where I was a cloud consultant intern for the AWS cloud practice team. WWT develops technical solutions for clients by utilizing their application, infrastructure, ATC lab, consulting, and supply chain services. The Advanced Technology Center (ATC) is how they stay updated on continuous innovations. I was able to be part of four different projects that focused on important AWS cloud concepts, including the Well-Architected Framework, Cloud Adoption Framework, security implementation, Cloud Center of Excellence, global infrastructure, and more. I was able to attend meetings with stakeholders, which taught me not only the importance of technical terminology but also how to communicate through business lingo. In conjunction with my main role, I participated in WWT's Day of Caring and the intern capstone project competition that allows teams to experience solving a real-world issue that the company faces. This opportunity has helped me with my personal growth and solidified my career priorities within the technology field.
