Name: Mohamud Warsame
Project Title: Physical Inventory Planning (PIP) Application
Company: Target
Industry Sponsor: Keith Townsend
497 Instructor: Monika Sobolewski

This summer, I worked as a software engineer intern at Target in the finance department with the Inventory Valuation product team. We are responsible for all the financial impacts of inventory movement throughout the company. The project I worked on was an application rewrite. This application, Physical Inventory Planning (PIP), is used by our headquarters team to schedule annual physical inventories at the 1900+ locations. It was originally written a few years ago by a different team and as a part of my internship I was to re-write it to our team's standards and patterns.
