

Name: Raz Consta

Project Title: Parabola – Digital Wallet

Company: West Monroe

Industry Sponsor: Mike Osborne

497 Instructor: Monika Sobolewska

I spent 10 weeks of my summer being a software engineer intern at West Monroe. West Monroe is a multi-disciplinary consulting company that is focused on bringing digital services to its customers. I was staffed on two internal projects that required me to efficiently manage my time each week. For one project, I learned React from scratch and implemented front-end components of a web app interface. There was also back-end work involved, where I had to implement continuous integration pipelines on Microsoft Azure Dev Ops. On top of that, I had the chance to be scrum master for a 2-week sprint and I was the person conducting the scrum meetings. My second project consisted of adding features to a digital wallet focused on cryptocurrencies. I used various APIs to show real-time trend data of cryptocurrencies and I had to learn about web3 and blockchain transactions to implement these features. In addition to improving my technical skills, I had to constantly work on my soft skills, which allowed me to make connections within the company and improve my presentation skills.
