Name: Tony Le
Project Title: Quantum App Center
Company: T-Mobile
Industry Sponsor: Jack Jacinto (Quantum)
497 Instructor: Monika Sobolewska

At T-Mobile, I was a part of the Software Innovation Team (Quantum) and I started out as a front-end developer. My tasks focused on providing a software framework for analytical apps. These apps administer customer troubleshooting, performance, and analysis, in order to provide decision-making information across multiple fields such as engineering and business. I believe I had made great impact by innovating the way T-Mobile uses these apps and with the support of my manager and team, I was able to learn more than I could have ever expected. By the end of my internship, I gained critical professional experience, expanded my knowledge into full-stack development through hands on projects, presented to the senior vice president of my department, and have even received a full-time job offer! I am fully ready to be an even greater asset to this company and I am proud to be a part of T-Mobile.
