

Name: Elijah Amian
Project Title: Indicia for Case Management
Company: MCG Health
Industry Sponsor: Swetha Malyavantham
497 Instructor: Monika Sobolewska

This summer quarter, I worked with amazing engineers at MCG Health Seattle. MCG Health is focused on deploying software solutions for doctors and patients. I was assigned with upgrading several outdated third-party libraries used in the codebase and with deploying a site to Azure Devops. My project affected every part of the company website so I had to make sure that my changes were well tested and documented, so no errors could slip into production. Since error fixing and debugging constituted an important part of the process, I learned a wide variety of the development tools as well. My job involved a lot of reading and understanding existing code, reading different documentations so I can create sound solutions to problems, and going back and forth between tests to make sure my solution didn't cause any more problems. The skills and experience during my internship will better prepare me for the industry.
