

In The USA, Brazil, and South Africa

Alex Evans

The Big Questions

- What barriers do transgender people face globally?
- Are there commonalities across countries?

There are many barriers transgender people face globally

Commonalities do exist

These barriers can be removed with changes to the perception of transgender people and the healthcare systems

Which Countries and Why?

South Africa: Public and Private, public covers some costs for everyone

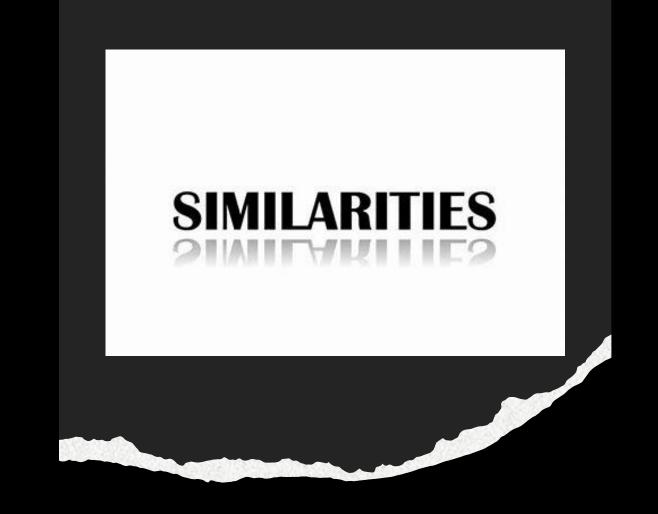

Brazil: Completely public

U.S.: Public and Private, public only helps seniors, disabled, and low-income people

Similarities in Barriers to Healthcare Across Countries

- Knowledge
- Discrimination
- Availability

Comparisons

<u>USA</u>

Explaining Medical History

Perceived Invasive Exams

Insurance Issues

Comparisons

<u>Brazil</u>

Lack of Knowledge in

Sexuality and Body parts

Religious Interference

Age and diagnostic requirements

Comparisons

South Africa

Lack of Knowledge of Transgender People

All problems considered transgender problems

Transgender people turned into spectacle

Lack of facilities that provide gender-affirming care

Transgender People face Similar Difficulties Regardless of Country

What this means:

Issues need to be addressed on a global scale

More accessible healthcare in the meantime

Standardized education on transgender people

What an Ideal System may look like

- Education on transgender healthcare
- Universal or cheaper healthcare
- More available healthcare
- Discrimination training

What these countries need to focus on

U.S.A. – Universal/cheaper healthcare

Brazil – Discrimination Training

South Africa – More available healthcare facilities

- 2% of population is transgender (World Population Review, 2024)
- Potential decline in access to healthcare over time
- Restrictive policies being passed
