Title: Tres West Electrical Designer  
Faculty Sponsor: Dr. Vahid Dargahi  
Student: Allison Fintak

For my internship I worked at Tres West Engineers. Tres West is a local engineering consulting firm here in Tacoma, WA. My time at Tres West taught me what life after university will be like. I want to say first that my mentors Mr. Henning and Mr. Meulink were amazing and allowed me to be a part of projects that were challenging and taught me so much. My time spent in the office was one of the most fruitful experiences during my time in college. I was able to apply concepts into real world scenarios. I was able to be a part of almost every different service that the electrical team offers. I was able to be a part of almost every different service that the electrical team offers. I was able to experience the designing of low/medium voltage systems that included sizing panels, wires, transformers, the control, and circuiting these systems. This also included learning new programs which is a great asset. These programs included AutoCAD, Revit, AGI32, and Bluebeam.

Electrical engineering is such a vast field and I am so gracious to have had the opportunity to intern at TWE and see a section of engineering that I really enjoy and can see myself focusing on. I am moving on from this internship with a lot more skills you can not get from a class and a job offer!
