During my internship at T-Mobile, I got the exciting opportunity to take part in the Emergency and Location Service and Automation (ELSA) team. This team is responsible for making applications that make it possible to maintain the emergency 911 system. My project was to create a web application called the ESRK Manager used by a 911 services team in T-Mobile. In the course of creating my first web application, I learned about many new technologies including servers, Spring Boot, Angular, and LDAP (Local Directory Access Protocol). It was very meaningful to be able to work on a project that played a small part in making T-Mobile’s 911 service functional and reliable. I feel very fortunate to have had this opportunity to further my career in becoming a software engineer.
