Abstract.
In today’s world, mobile applications play a significant role in our day to day lives. There is a mobile application virtually for everything that we can think of. Mobile phones are ubiquitous, and this has made it easier for businesses to reach their clients easier by merely creating a mobile application. Their simplicity and ease of use have made mobile apps popular. By using these outlined benefits, we tried to overcome the difficulty of obtaining course materials faced by our fellow college students. We believe creating an interactive mobile app catered explicitly to students will eradicate this problem. The application includes a variety of features not limited to: New students will be able to create accounts using their email address and password, and current students can login using their existing credentials, users will be able to select their desired course and study shorten and simplified lessons in each subject. They are also able to take a quiz to test their knowledge based on what they have studied/read.
