**Presentation Type:** Video Presentation

**Abstract:**

AMP Website Demo Video  
Shannon Sigmon, DC Grant, University of Washington Tacoma

Online creators currently need to use several different applications to manage their social media, sell merchandise, stream audio and video content, and showcase photography and literature. They are met with the inconvenience of having to wait for thousands of streams before receiving substantial income or companies taking a percentage of their earned profits when using these various platforms. I developed a solution in the form of a mobile app that has been expanded into a website called the Artist Management Platform or AMP. AMP is intended to combine the features of widely used social media and content streaming sites into one location, allowing creators to manage their content easier. The website was developed using HTML, CSS and Firebase for authentication and is currently under construction.
