Data Analyst Internship Abstract
Name: Tyler Bain
Faculty Advisor: Ankur Suri

In this role I will receive real world experience concerning Data Analysis and Science. I will work on projects such as an industry benchmark project and start to implement the knowledge that I have learned here at UW Tacoma. I hope to use SQL in the workplace to help visualize the data we receive and make informed decisions using it. I will hopefully also get to use my knowledge on ML models within the workplace and also learn more about them. The project that I am currently on will be used by data scientists (and hopefully myself) to run Machine Learning Models to automate processes that would otherwise be manual.

This internship is the first step in a future career in Data Analysis or Business Intelligence Analysis. I will grow my querying skills and use them in a business setting to complete projects. I will continue to grow my SQL, Python, and other business skills in this position in order to prepare for a full-time job after the conclusion of the internship.
