edTPA stems from a twenty-five-year history of developing performance-based assessments of teaching quality and effectiveness. The Teacher Performance Assessment Consortium (Stanford and AACTE) acknowledges the National Board for Professional Teaching Standards, the Interstate Teacher Assessment and Support Consortium, and the Performance Assessment for California Teachers for their pioneering work using discipline-specific portfolio assessments to evaluate teaching quality. This version of the handbook has been developed with thoughtful input from over six hundred teachers and teacher educators representing various national design teams and Washington student-voice committees, national subject matter organizations (ACEI, ACTFL, AMLE, CEC, IRA, NAEYC, NAGC, NCSS, NCTE, NCTM, NSTA, SHAPE America), and content validation reviewers. All contributions are recognized and appreciated.

This document was authored by the Stanford Center for Assessment, Learning, and Equity (SCALE) with editorial and design assistance from Evaluation Systems.

Introduction to edTPA Elementary Mathematics for Washington

Purpose

The purpose of edTPA Elementary Mathematics, a nationally available performance-based assessment, is to measure novice teachers’ readiness to teach elementary mathematics. The assessment is designed with a focus on student learning and principles from research and theory. It is based on findings that successful teachers:

- develop knowledge of subject matter, content standards, and subject-specific pedagogy
- develop and apply knowledge of varied students’ needs
- consider research and theory about how students learn
- reflect on and analyze evidence of the effects of instruction on student learning

The Washington version adds a state emphasis of involving students in their own learning process and providing student-voice evidence. As a performance-based assessment, edTPA is designed to engage candidates in demonstrating their understanding of teaching and student learning in authentic ways.

Overview of the Assessment

The edTPA Elementary Mathematics for Washington assessment is composed of three tasks:

1. Planning for Instruction and Assessment
2. Instructing and Engaging Students in Learning
3. Assessing Student Learning

For this assessment, you will first plan 3–5 consecutive mathematics lessons referred to as a learning segment. Consistent with the Principles and Standards for School Mathematics (NCTM 2000), a learning segment prepared for this assessment should reflect a balanced approach to mathematics. This means your segment should include learning tasks where students have opportunities to develop and monitor their own:

- conceptual understanding
- procedural fluency
- mathematical reasoning and/or problem-solving skills
- precise communication skills
You will then teach the learning segment, making a videorecording of your interactions with students during instruction. You will also assess, informally and formally, students’ learning throughout the learning segment. Upon completion of the three tasks, you will submit artifacts from the tasks (e.g., lesson plans, clips from your videorecording, assessment materials, instructional materials, student work samples), as well as commentaries that you have written to explain and reflect on the Planning, Instruction, and Assessment components of the tasks. The artifacts and commentaries for each task will then be evaluated using rubrics especially developed for each task.

The edTPA Tasks and the Cycle of Effective Teaching

The three edTPA tasks represent a cycle of effective teaching (i.e., teaching that is focused on student learning). Planning Task 1 documents your intended teaching, Instruction Task 2 documents your enacted teaching, and Assessment Task 3 documents the impact of your teaching on student learning.

The three tasks and the evidence you provide for each are framed by your understandings of your students and their learning. As you develop, document, and teach your lessons, you will reflect upon the cyclical relationship among planning, instruction, and assessment with a focus on your students’ learning needs.

Evidence of Teaching Practice: Artifacts and Commentaries

An essential part of edTPA is the evidence you will submit of how you planned, taught, and assessed your lessons to deepen student learning in mathematics. This evidence includes both artifacts and commentaries:
- **Artifacts** represent authentic work completed by you and your students. These include lesson plans, copies of instructional and assessment materials, video clips of your teaching, student work samples, and student-voice evidence.

- **Commentaries** are your opportunity to describe your artifacts, explain the rationale behind their choice, and analyze what you have learned about your teaching practice and your students’ learning and their understanding of their own learning. Note that although your writing ability will not be scored directly, commentaries must be clearly written and well focused.

When preparing your artifacts and commentaries, refer to the rubrics frequently to guide your thinking, planning, and writing. Refer to the **Elementary Mathematics for Washington Evidence Chart** for information about how your evidence should be formatted for electronic submission.

### Evaluation Criteria

The rubrics used to score your performance on the edTPA portfolio are included in this handbook, following the sections describing the directions for each task. The descriptors in the five-level rubrics address a wide range of performance, beginning with the knowledge and skills of a novice not ready to teach (Level 1) and extending to the advanced practices of a highly accomplished beginner (Level 5).

### Structure of the Handbook

The following pages provide specific instructions on how to complete each of the three tasks of the edTPA Elementary Mathematics for Washington assessment. After an overview of the tasks, the handbook provides instructions for each task organized into four sections:

1. **What Do I Need to Think About?**
   This section provides focus questions for you to think about when completing the task.

2. **What Do I Need to Do?**
   This section provides specific, detailed directions for completing the task.

3. **What Do I Need to Write?**
   This section tells you what you need to write and also provides specific and detailed directions for writing the commentary for the task.

4. **How Will the Evidence of My Teaching Practice Be Assessed?**
   This section includes the rubrics that will be used to assess the evidence you provide for the task.

Additional requirements and resources are provided for you in this handbook:

- **Professional Responsibilities**: guidelines for the development of your evidence

- **Elementary Mathematics Context for Learning Information**: prompts used to collect information about your school/classroom context

- **Elementary Mathematics for Washington Evidence Chart**: specifications for electronic submission of evidence (artifacts and commentaries), including templates, supported file types, number of files, response length, and other important evidence specifications
**Glossary**: definitions of key terms can be accessed by rolling your cursor over each glossary term marked with a dotted underline throughout the handbook or by referring to the *Elementary Mathematics for Washington Glossary*.

You should review the *Making Good Choices* document prior to beginning the planning of the learning segment. If you are in a preparation program, it will have additional resources that provide guidance as you develop your evidence.

Review all instructions carefully before beginning to teach the learning segment to ensure that you are well prepared for all tasks. Before you record your videos, pay particular attention to the specific content focus of each video clip submission; these foci are described in the What Do I Need to Do? sections in **Instruction Task 2** and **Assessment Task 3**. Refer to the *Professional Responsibilities* section of this handbook for important information about permissions, confidentiality, and other requirements.

If your program requires you to submit artifacts and commentaries for official scoring, refer to [www.edTPA.com](http://www.edTPA.com) for complete and current information before beginning your work and to download templates for submitting materials. The website contains information about the registration process, submission deadlines, submission requirements, withdrawal/refund policies, and score reporting. It also provides contact information should you have questions about your registration and participation in edTPA.

Whether submitting directly to [www.edTPA.com](http://www.edTPA.com) or via your program’s electronic portfolio management system, follow the submission guidelines as documented in the Evidence Chart and review [edTPA Submission Requirements](http://www.edTPA.com) to ensure that your materials conform to the required evidence specifications and requirements for scoring.

Planning Task 1: Planning for Instruction and Assessment

What Do I Need to Think About?

In Planning Task 1, you will describe your plans for the learning segment and explain how your instruction is appropriate for the students and the content you are teaching. As you develop your plans, you need to think about the following:

- What do your students know, what can they do, and what are they learning to do?
- What do you want your students to learn? What are the important understandings and core concepts you want students to develop within the learning segment?
- How will you use your knowledge of your students’ assets to inform your plans?
- What instructional strategies, learning tasks, and assessments will you design to support student learning and language use?
- How will your learning segment support students to develop and use language that deepens content understanding?
- How is the teaching you propose supported by research and theory about how students learn?

What Do I Need to Do?

- **Select a class.** If you teach more than one class, select one focus class for this assessment. If your placement for mathematics has you responsible for a group rather than a whole class, plans should describe instruction for that group (*minimum of 4 students*). That group will constitute “the whole class” for edTPA.

- **Provide context information.** The Elementary Mathematics Context for Learning Information form is provided later in this handbook and must be submitted in a template. This form provides essential information about your students and your school/classroom. The context information you submit should be no more than 4 pages, including the prompts.

- **Identify a learning segment to plan, teach, and analyze.** Review the curriculum with your cooperating teacher and select a learning segment of *3–5 consecutive lessons*.

- **Identify a central focus.** Identify the central focus along with the content standards and learning target(s) you will address in the learning segment. The central focus should support students in developing
  - conceptual understanding,
  - procedural fluency, AND
  - mathematical reasoning or problem-solving skills.
Identify and plan to support language demands. Select a key language function from your learning target(s). Choose a learning task that provides opportunities for students to practice using that language function. Identify additional language demands associated with that task. Plan targeted supports that address the identified language demands, including the language function.

Write a lesson plan for each lesson in the learning segment. Your lesson plans should be detailed enough that a substitute or other teacher could understand them well enough to use them.

Your lesson plans must include the following information, even if your teacher preparation program requires you to use a specific lesson plan format:

- State-adopted student academic content standards that are the target of student learning. (Note: Please include the number and text of each standard that is being addressed. If only a portion of a standard is being addressed, then only list the part or parts that are relevant.)
- Learning target(s) associated with the content standards
- Informal and formal assessments used by both the teacher and students to monitor student learning, including type(s) of assessment and what is being assessed
- Instructional strategies and learning tasks (including what you and the students will be doing) that support diverse student needs
- Instructional resources and materials that assist students in meeting the learning target(s)

Each lesson plan must be no more than 4 pages in length. You will need to condense or excerpt lesson plans longer than 4 pages. Any explanations or rationale for decisions should be included in your Planning Commentary and deleted from your plans.

Respond to the commentary prompts listed in the Planning Commentary section prior to teaching the learning segment.

Submit your original lesson plans. If you make changes while teaching the learning segment, you may offer reflection on those changes in the Instruction Task 2 and Assessment Task 3 Commentaries.

Select and submit key instructional materials needed to understand what you and the students will be doing (no more than 5 additional pages per lesson plan). The instructional materials might include such items as class handouts, assignments, slides, and interactive whiteboard images.

Submit copies of all written assessments and/or directions for any oral or performance assessments. (Submit only the blank assessment given to students; do not submit student work samples for this task.)

Provide citations for the source of all materials that you did not create (e.g., published texts, websites, and material from other educators). List all citations by lesson number at the end of the Planning Commentary. Note: Citations do not count toward the commentary page limit.
See the Planning Task 1: Artifacts and Commentary Specifications in the Elementary Mathematics for Washington Evidence Chart for instructions on electronic submission of evidence. This evidence chart identifies templates, supported file types, number of files, response length, and other important evidence specifications. Your evidence cannot contain hyperlinked content. Any web content you wish to include as part of your evidence must be submitted as a document file, which must conform to the file format and response length requirements.

What Do I Need to Write?

In Planning Task 1, you will write

- a description of your Context for Learning (see “What Do I Need to Do?” above for directions)
- lesson plans (see “What Do I Need to Do?” above for directions)
- a commentary explaining your plans (see “Planning Commentary” below for directions)

Planning Commentary

In Planning Task 1, you will write a commentary, responding to the prompts below. Your commentary should be no more than 11 single-spaced pages, including the prompts.

1. Central Focus
   a. Describe the central focus and purpose of the content you will teach in the learning segment.
   b. Given the central focus, describe how the standards and learning target(s) within your learning segment address
      - conceptual understanding,
      - procedural fluency, AND
      - mathematical reasoning or problem-solving skills.
   c. Explain how your plans build on each other to help students make connections between
      - concepts,
      - computations/procedures, AND
      - mathematical reasoning or problem-solving strategies to build understanding of mathematics.
   d. Student Understanding of Learning Targets
      - If not in your lesson plans, provide the learning targets exactly as presented to students.
      - How and when will you introduce the learning targets to students?
How and when will you give students opportunities to express their understanding of the learning targets and why they are important to learn?

What tools or strategies will students use? How familiar are students with them?

2. Knowledge of Students to Inform Teaching

For each of the prompts below (2a–c), describe what you know about your students with respect to the central focus of the learning segment.

Consider the variety of learners in your class who may require different strategies/support (e.g., students with IEPs or 504 plans, English language learners, struggling readers, underperforming students or those with gaps in academic knowledge, and/or gifted students).

a. Prior academic learning and prerequisite skills related to the central focus and the learning targets—Cite evidence of what students know, what they can do, and what they are still learning to do.

b. Personal, cultural, and community assets related to the central focus—What do you know about your students’ everyday experiences, cultural and language backgrounds and practices, and interests?

c. Mathematical dispositions related to the central focus—What do you know about the extent to which your students

- perceive mathematics as “sensible, useful, and worthwhile”
- persist in applying mathematics to solve problems
- believe in their own ability to learn mathematics

3. Supporting Students’ Mathematics Learning

Respond to prompts below (3a–c). To support your justifications, refer to the instructional materials and lesson plans you have included as part of Planning Task 1. In addition, use principles from research and/or theory to support your justifications.

a. Justify how your understanding of your students’ prior academic learning; personal, cultural, and community assets; and mathematical dispositions (from prompts 2a–c above) guided your choice or adaptation of learning tasks and materials. Be explicit about the connections between the learning tasks and students’ prior academic learning, their assets, their mathematical dispositions, and research/theory.

b. Describe and justify why your instructional strategies and planned supports are appropriate for the whole class, individuals, and/or groups of students with specific learning needs.

Consider the variety of learners in your class who may require different strategies/support (e.g., students with IEPs or 504 plans, English language learners, struggling readers, underperforming students or those with gaps in academic knowledge, and/or gifted students).

---

1 From the Common Core State Standards for Mathematics
c. Describe common mathematical preconceptions, errors, or misunderstandings within your central focus and how you will address them.

4. **Supporting Mathematics Development Through Language**

   As you respond to prompts 4a–d, consider the range of students’ language assets and needs—what do students already know, what are they struggling with, and/or what is new to them?

a. **Language Function.** Using information about your students’ language assets and needs, identify one language function essential for students to develop conceptual understanding, procedural fluency, mathematical reasoning, or problem-solving skills within your central focus. Listed below are some sample language functions. You may choose one of these or another language function more appropriate for your learning segment:

   | Categorize | Compare/contrast | Describe | Interpret | Justify |

   Please see additional examples and non-examples of language functions in the glossary.

b. Identify a key learning task from your plans that provides students with opportunities to practice using the language function identified above. Identify the lesson in which the learning task occurs. (Give lesson day/number.)

c. **Additional Language Demands.** Given the language function and learning task identified above, describe the following associated language demands (written or oral) students need to understand and/or use:

   - Vocabulary and/or symbols
   - Plus at least one of the following:
     - Syntax
     - Discourse

d. **Language Supports.** Refer to your lesson plans and instructional materials as needed in your response to the prompt.

   - Identify and describe the planned instructional supports (during and/or prior to the learning task) to help students understand, develop, and use the identified language demands (vocabulary and/or symbols, function, discourse, syntax).

5. **Monitoring Student Learning**

   In response to the prompts below, refer to the assessments you will submit as part of the materials for Planning Task 1.

a. Describe how your planned formal and informal assessments will provide direct evidence for you and your students to monitor their conceptual understanding, computational/procedural fluency, **AND** mathematical reasoning or problem-solving skills **throughout** the learning segment.
b. Explain how the design or adaptation of your planned assessments allows students with specific needs to demonstrate their learning.

Consider the variety of learners in your class who may require different strategies/support (e.g., students with IEPs or 504 plans, English language learners, struggling readers, underperforming students or those with gaps in academic knowledge, and/or gifted students).

c. Describe when and where you and the students will use tools and/or strategies to identify what they are doing well and what they need to improve to reach the learning targets through a process of reflection, revision, and goal setting.

How Will the Evidence of My Teaching Practice Be Assessed?

For Planning Task 1, your evidence will be assessed using rubrics 1–5, which appear on the following pages, and Student-Voice Rubric 16, which appears after Rubric 15. When preparing your artifacts and commentaries, refer to the rubrics frequently to guide your thinking, planning, and writing.
# Planning Rubrics

## Rubric 1: Planning for Mathematical Understandings

How do the candidate’s plans build students’ conceptual understanding, procedural fluency, AND mathematical reasoning or problem-solving skills?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
</table>
| Candidate’s plans for instruction **focus solely on** facts and/or procedures with **no connections to**  
  - concepts **OR**  
  - mathematical reasoning or problem-solving skills. | Candidate’s plans for instruction **support student learning of facts and procedures with vague connections to**  
  - concepts **OR**  
  - mathematical reasoning or problem-solving skills. | Candidate’s plans for instruction **build on each other to support learning of facts and procedures with clear connections to**  
  - concepts **OR**  
  - mathematical reasoning or problem-solving skills. | Candidate’s plans for instruction build on each other to support learning of facts and procedures with clear and **consistent** connections to  
  - concepts **AND**  
  - mathematical reasoning or problem-solving skills. | **Level 4 plus:** Candidate explains how they will use learning tasks and materials to **lead students to make clear and consistent connections.** |

OR

There are **significant content inaccuracies** that will lead to student misunderstandings.

OR

Standards, learning target(s), and learning tasks and materials are **not aligned with each other.**

---

2 Text representing key differences between adjacent score levels is shown in bold. Evidence that does not meet Level 1 criteria is scored at Level 1.
Rubric 2: Planning to Support Varied Student Learning Needs

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>There is no evidence of planned supports.</td>
<td>Planned supports are loosely tied to learning target(s) or the central focus of the learning segment.</td>
<td>Planned supports are tied to learning target(s) and the central focus with attention to the characteristics of the class as a whole.</td>
<td>Planned supports are tied to learning target(s) and the central focus. Supports address the needs of specific individuals or groups with similar needs.</td>
<td>Level 4 plus: Supports include specific strategies to identify and respond to preconceptions, common errors, and misunderstandings.</td>
</tr>
</tbody>
</table>

OR

Candidate does not attend to ANY INSTRUCTIONAL requirements in IEPs and 504 plans.
### Rubric 3: Using Knowledge of Students to Inform Teaching and Learning

**How does the candidate use knowledge of his/her students to justify instructional plans?**

<table>
<thead>
<tr>
<th><strong>Level 1</strong></th>
<th><strong>Level 2</strong></th>
<th><strong>Level 3</strong></th>
<th><strong>Level 4</strong></th>
<th><strong>Level 5</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Candidate’s justification of learning tasks is either missing OR represents a deficit view of students and their backgrounds.</td>
<td>Candidate justifies learning tasks with limited attention to students’ • prior academic learning OR • personal, cultural, or community assets.</td>
<td>Candidate justifies why learning tasks (or their adaptations) are appropriate using examples of students’ • prior academic learning OR • personal, cultural, or community assets. Candidate makes superficial connections to research and/or theory.</td>
<td>Candidate justifies why learning tasks (or their adaptations) are appropriate using examples of students’ • prior academic learning AND • personal, cultural, or community assets. Candidate makes connections to research and/or theory.</td>
<td>Level 4 plus: Candidate’s justification is supported by principles from research and/or theory.</td>
</tr>
</tbody>
</table>
Rubric 4: Identifying and Supporting Language Demands

How does the candidate identify and support language demands associated with a key mathematics learning task?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Language demands&lt;sup&gt;3&lt;/sup&gt; identified by the candidate are not consistent with the selected language function&lt;sup&gt;4&lt;/sup&gt; OR task.</td>
<td>Language supports primarily address one language demand (vocabulary and/or symbols, function, discourse, syntax).</td>
<td>General language supports address use of two or more language demands (vocabulary and/or symbols, function, discourse, syntax).</td>
<td>Targeted language supports address use of • vocabulary and/or symbols, • language function, <strong>AND</strong> • one or more additional language demands (discourse, syntax).</td>
<td>Level 4 plus: Language supports are designed to meet the needs of students with different levels of language learning.</td>
</tr>
</tbody>
</table>

<sup>3</sup> Language demands include: language function, vocabulary and/or symbols, syntax, and discourse (organizational structures, text structure, etc.).

<sup>4</sup> Language function refers to the learning outcome (verb) selected in Planning Commentary Prompt 4a (e.g., categorize, describe).
Rubric 5: Planning Assessments to Monitor and Support Student Learning

How are the informal and formal assessments selected or designed to monitor students’ conceptual understanding, procedural fluency, AND mathematical reasoning or problem-solving skills?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>The assessments only provide evidence of students’ procedural skills or factual knowledge.</td>
<td>The assessments provide limited evidence to monitor students’ conceptual understanding, procedural fluency, OR mathematical reasoning or problem-solving skills during the learning segment.</td>
<td>The assessments provide evidence to monitor students’ conceptual understanding, procedural fluency, AND mathematical reasoning or problem-solving skills during the learning segment.</td>
<td>The assessments provide multiple forms of evidence to monitor students’ progress toward developing conceptual understanding, procedural fluency, AND mathematical reasoning or problem-solving skills throughout the learning segment.</td>
<td>Level 4 plus: The assessments are strategically designed to allow individuals or groups with specific needs to demonstrate their learning.</td>
</tr>
</tbody>
</table>

OR

Candidate does not attend to ANY ASSESSMENT requirements in IEPs and 504 plans.
Instruction Task 2: Instructing and Engaging Students in Learning

What Do I Need to Think About?

In Instruction Task 2, you will demonstrate how you support and engage students in learning. Before you begin your instruction, you need to think about the following:

- What kind of learning environment do you want to develop in order to establish respect and rapport, and to support students’ engagement in learning?
- What kinds of learning tasks actively engage students in the central focus of the learning segment?
- How will you elicit and build on student responses in ways that develop and deepen content understanding?
- In what ways will you connect new content to your students’ prior academic learning and personal, cultural, or community assets during your instruction?
- How will you use evidence from your instruction to examine and change your teaching practices to more effectively meet a variety of student learning needs?

What Do I Need to Do?

- **Obtain required permission for videorecording.** Before you record your video, ensure that you have the appropriate permission from the parents/guardians of your students and from adults who appear in the video. Adjust the camera angle to exclude individuals for whom you do not have permission to film.

- **Examine your lesson plans for the learning segment** and identify challenging learning tasks in which you and your students are actively engaged. The video clip(s) you select for submission should provide a sample of how you interact with students to
  - develop understanding of mathematical concepts AND, as appropriate,
  - elicit their understandings of the learning target(s) and communicate what they are doing well and what they need to improve relative to the learning target(s).

- **Identify lessons to videorecord.**

- **Provide 1–2 video clip(s) (together totaling no more than 15 minutes, but not less than 3 minutes)** that demonstrate how you engage students in developing understanding of mathematical concepts.
  - If the selected video clip(s) do not provide video evidence of the use of tools and/or strategies for students to communicate their understandings of the learning targets and/or reflect on what they are doing well and what they need to improve, you may provide an additional clip of no more than 5 minutes with that focus. (If reflections are collected through a written tool, you may just describe the tool in the commentary.)
(Optional) Provide evidence of students’ language use. You may provide evidence of language use with your video clip(s) from Instruction Task 2, an additional video clip of one or more students using language within the learning segment (no more than 5 minutes in length), AND/OR through the student work samples analyzed in Assessment Task 3.

Determine whether you will feature the whole class or a targeted group of students (minimum of 4 students) within the class.

Videorecord your classroom teaching. Tips for videorecording your class are available from your teacher preparation program.

Select video clip(s) to submit and verify that the clip(s) meet the following requirements:

- Check the video and sound quality to ensure that you and your students can be seen and heard on the video clip(s) you submit. If most of the audio in a clip cannot be understood by a scorer, submit another clip. If there are occasional audio portions of a clip that cannot be understood that are relevant to your commentary responses, do one of the following: 1) provide a transcript with time stamps of the inaudible portion and refer to the transcript in your response; 2) embed quotes with time-stamp references in the commentary response; or 3) insert captions in the video (captions for this purpose will be considered permissible editing).

- A video clip must be continuous and unedited, with no interruption in events.

- If you have inadvertently included individuals for whom you do not have permission to film in the video clip(s) you plan to submit, you may use software to blur the faces of these individuals. This is not considered editing. Other portions of the submitted video clip(s)—including the classroom, your face, and the faces of individuals for whom you have obtained permission to film—should remain unblurred.

- Do not include the name of the state, school, or district in your video. Use first names only for all individuals appearing in the video.

Respond to the prompts listed in the Instruction Commentary section below after viewing the video clip(s).

Determine if additional information is needed to understand what you and the students are doing in the video clip(s). For example, if there are graphics, texts, or images that are not clearly visible in the video, or comments that are not clearly heard, you may insert digital copies or transcriptions at the end of the Instruction Commentary (no more than 2 pages in addition to the responses to commentary prompts).

See the Instruction Task 2: Artifacts and Commentary Specifications in the Elementary Mathematics for Washington Evidence Chart for instructions on electronic submission of evidence. This chart identifies templates, supported file types, number of files, response length, and other important evidence specifications. Your evidence cannot contain hyperlinked content. Any web content you wish to include as part of your evidence must be submitted as a document file, which must conform to the file format and response length requirements.
What Do I Need to Write?

Instruction Commentary
In Instruction Task 2, you will write a commentary, responding to the prompts below. Your commentary should be no more than 7 single-spaced pages, including the prompts. If needed, insert no more than 2 additional pages of supporting documentation for the videorecordings at the end of the commentary (e.g., digital copies of indiscernible materials or transcriptions of inaudible comments). These additional pages do not count toward the commentary page limit noted above.

1. Which lesson or lessons are shown in the video clip(s)? Identify the lesson(s) by lesson plan number.

2. Promoting a Positive Learning Environment
   Refer to scenes in the video clip(s) where you provided a positive learning environment.
   a. How did you demonstrate mutual respect for, rapport with, and responsiveness to students with varied needs and backgrounds, and challenge students to engage in learning?

3. Engaging Students in Learning
   Refer to examples from the video clip(s) in your responses to the prompts.
   a. Describe the tools and/or strategies you used to elicit student expression of their understanding of the learning target(s) and why they are important.
   b. Explain how your instruction engaged students in developing understanding of mathematical concepts.
   c. Describe how your instruction linked students’ prior academic learning and personal, cultural, and community assets with new learning.

4. Deepening Student Learning during Instruction
   Refer to examples from the video clip(s) in your explanations.
   a. Explain how you elicited and built on student responses to promote thinking and develop understandings of mathematical concepts.
   b. Explain how you and the students used representations (manipulatives, models, tools, diagrams, charts) to support students’ understanding and use of mathematical concepts.
   c. Student Understanding of Learning Progress
      ▪ Explain how you and the students used tools and/or strategies to assist them in reflecting on what they are doing well and/or what they need to improve. Provide time stamp references for examples in the clip(s) or describe the use of written tools.
      ▪ Explain how familiar students are with the use of each tool or strategy.
5. Analyzing Teaching

Refer to examples from the video clip(s) in your responses to the prompts.

a. What changes would you make to your instruction—for the whole class and/or for students who need greater support or challenge—to better support student learning of the central focus (e.g., missed opportunities)?

Consider the variety of learners in your class who may require different strategies/support (such as students with IEPs or 504 plans, English language learners, struggling readers, underperforming students or those with gaps in academic knowledge, and/or gifted students).

b. Why do you think these changes would improve student learning? Support your explanation with evidence of student learning AND principles from theory and/or research.

How Will the Evidence of My Teaching Practice Be Assessed?

For Instruction Task 2, your evidence will be assessed using rubrics 6–10, which appear on the following pages, and Student-Voice Rubric 17, which appears after Rubric 16. When preparing your artifacts and commentaries, refer to the rubrics frequently to guide your thinking, instruction, and writing.
# Instruction Rubrics

## Rubric 6: Learning Environment

How does the candidate demonstrate a respectful learning environment that supports students’ engagement in learning?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>The clip(s) reveal evidence of disrespectful interactions between teacher and students or between students.</td>
<td>The candidate demonstrates respect for students.</td>
<td>The candidate demonstrates rapport with and respect for students.</td>
<td>The candidate demonstrates rapport with and respect for students.</td>
<td>The candidate demonstrates rapport with and respect for students.</td>
</tr>
<tr>
<td>OR</td>
<td>AND Candidate provides a learning environment that serves primarily to control student behavior, and minimally supports the learning goals.</td>
<td>AND Candidate provides a positive, low-risk learning environment that reveals mutual respect among students.</td>
<td>AND Candidate provides a challenging learning environment that promotes mutual respect among students.</td>
<td>AND Candidate provides a challenging learning environment that provides opportunities to express varied perspectives and promotes mutual respect among students.</td>
</tr>
<tr>
<td>Candidate allows disruptive behavior to interfere with student learning.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Rubric 7: Engaging Students in Learning

How does the candidate actively engage students in developing understanding of mathematical concepts?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students are participating in tasks that are vaguely or superficially related to the central focus.</td>
<td>Students are participating in learning tasks focusing primarily on mathematical skills or procedures with little attention to developing understanding of mathematical concepts.</td>
<td>Students are engaged in learning tasks that address understanding of mathematical concepts.</td>
<td>Students are engaged in learning tasks that develop understanding of mathematical concepts.</td>
<td>Students are engaged in learning tasks that deepen and extend their understanding of mathematical concepts.</td>
</tr>
<tr>
<td>There is little or no evidence that the candidate links students' prior academic learning or personal, cultural, or community assets with new learning.</td>
<td>Candidate makes vague or superficial links between prior academic learning and new learning.</td>
<td>Candidate links prior academic learning to new learning.</td>
<td>Candidate links prior academic learning AND personal, cultural, or community assets to new learning.</td>
<td>Candidate prompts students to link prior academic learning AND personal, cultural, or community assets to new learning.</td>
</tr>
</tbody>
</table>
Rubric 8: Deepening Student Learning

<table>
<thead>
<tr>
<th>How does the candidate elicit responses to promote thinking and develop understanding of mathematical concepts?</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Level 1</strong></td>
</tr>
<tr>
<td>Candidate does most of the talking and students provide few responses.</td>
</tr>
<tr>
<td><strong>OR</strong></td>

</tbody>
</table>
# Rubric 10: Analyzing Teaching Effectiveness

How does the candidate use evidence to evaluate and change teaching practice to meet students' varied learning needs?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Candidate suggests changes unrelated to evidence of student learning.</td>
<td>Candidate proposes changes to teacher practice that are superficially related to student learning needs (e.g., task management, pacing, improving directions).</td>
<td>Candidate proposes changes that address students’ collective learning needs related to the central focus.</td>
<td>Candidate proposes changes that address individual and collective learning needs related to the central focus.</td>
<td>Level 4 plus: Candidate justifies changes using principles from research and/or theory.</td>
</tr>
</tbody>
</table>
Assessment Task 3: Assessing Student Learning

What Do I Need to Think About?

In Assessment Task 3, you will analyze students’ learning, their understanding of their learning progress, and their use of language. Before you begin the analysis, you need to think about the following:

- How will you gather evidence and make sense of what students have learned and understand about their learning progress?
- How will you provide meaningful feedback to your students?
- How will you use evidence of what students know and are able to do as well as student self-reflections to plan next steps in instruction?
- How will you analyze student self-reflections to improve tools and strategies for developing metacognitive skills?
- How will you identify evidence of and explain students’ use of language that demonstrates the development of content understanding?

What Do I Need to Do?

- Select one assessment from your learning segment you and the students will use to evaluate your students’ developing knowledge and skills. It should be an assessment that is completed by the whole class featured in the learning segment. (If you are teaching only a group within the class for the learning segment, that group will be “the whole class.”) The assessment should reflect the work of individuals, not groups, but may be individual work from a group task. The assessment should provide opportunities for students to demonstrate
  - conceptual understanding,
  - procedural fluency, AND
  - mathematical reasoning or problem-solving skills.
- Define and submit the evaluation criteria you will use to analyze student learning related to the mathematical understandings described above.
- Ask students to reflect on their performances on the selected assessment by
  - communicating the learning target in a developmentally appropriate way
  - describing what they did well and/or what they needed to improve
  - identifying tools and/or strategies needed to close any gap between present performance and the learning target(s)
- Collect and analyze student work and related self-reflections from the selected assessment to identify quantitative and qualitative patterns of learning within and
across learners in the class. You may submit text files with scanned student work, a video or audio file of a student’s oral work (e.g., counting), OR a student-created video or multimedia file. Student self-reflections may be submitted as either document or video files. For each focus student, a video or audio work sample and/or a video-recorded self-reflection must be no more than 5 minutes total running time.

- **Select 3 student work samples and related self-reflections** that represent the patterns of learning (i.e., what individuals or groups generally understood and what a number of students were still struggling to understand) you identified in your assessment analysis. Each work sample and self-reflection must come from the same student. These students will be your focus students for this task. **At least one of the focus students must have specific learning needs**, for example, a student with an IEP (Individualized Education Program) or 504 plan, an English language learner, a struggling reader, an underperforming student or a student with gaps in academic knowledge, and/or a gifted student needing greater support or challenge.

- **Document the feedback** you gave to each of the 3 focus students on the work sample itself, as an audio clip, or as a video clip. You must submit evidence of the actual feedback provided to each focus student, and not a description of the feedback.

- If you submit a student work sample or feedback as a video or audio clip or submit a student self-reflection as a video clip and comments made by you or your focus student(s) cannot be clearly heard, do one of the following: 1) attach a transcription of the inaudible comments (**no more than 2 additional pages**) to the end of the Assessment Commentary; 2) embed quotes with time-stamp references in the commentary response; or 3) insert captions in the video (captions for this purpose will be considered permissible editing).

- If you submit a student work sample or feedback as a video or audio clip or submit a student self-reflection as a video clip and additional students are present, clearly identify which students are your focus students in the relevant prompts (1f and 2a) of the Assessment Commentary (**in no more than 2 sentences**).

- **Respond to the prompts** listed in the Assessment Commentary section below after analyzing student work from the selected assessment.

- **Include and submit the selected assessment**, including directions/prompts provided to students. Attach the assessment (**no more than 5 additional pages**) to the end of the Assessment Commentary.

- **Provide evidence of students’ understanding and use of the targeted academic language function and other language demands.** You may choose evidence from the video clip(s) submitted in Instruction Task 2, an additional video clip of one or more students using language within the learning segment (**no more than 5 minutes in length**), AND/OR student work samples submitted in Assessment Task 3.

See the [Assessment Task 3: Artifacts and Commentary Specifications](#) in the Elementary Mathematics for Washington Evidence Chart for instructions on electronic submission of evidence. This evidence chart identifies templates, supported file types, number of files, response length, and other important evidence specifications. Your evidence cannot contain hyperlinked content. Any web content you wish to include as part of your evidence must be submitted as a document file, which must conform to the file format and response length requirements.
What Do I Need to Write?

Assessment Commentary

In Assessment Task 3, you will write a commentary responding to the prompts below. Your commentary should be no more than 12 single-spaced pages, including the prompts. Attach the assessment used to evaluate student performance (no more than 5 additional pages) and, if necessary, a transcription of inaudible portions of a multimedia clip of feedback, a student work sample, or a student self-reflection (no more than 2 additional pages) to the end of the Assessment Commentary. These additional pages do not count toward the commentary page limit noted above.

1. Analyzing Student Learning
   a. Identify the specific learning target(s) measured by the assessment you chose for analysis.
   b. Provide a graphic (table or chart) or narrative that summarizes student learning for your whole class. Be sure to summarize student learning for all evaluation criteria submitted in Assessment Task 3, Part D.
   c. Provide a graphic (table or chart) or narrative that summarizes student understanding of what they did well and/or needed to improve (student voice).
   d. Use evidence found in the 3 student work samples, student self-reflections, and the whole class summary to analyze the patterns of learning for the whole class and differences for groups or individual learners relative to
      - conceptual understanding,
      - procedural fluency, AND
      - mathematical reasoning or problem-solving skills.
   e. What did you learn from student self-reflections on their own learning progress, considering their performance on the assessment?
   f. If a video or audio work sample and/or a video self-reflection occurs in a group context (e.g., discussion), provide the name of the clip and clearly describe how the scorer can identify the focus student(s) (e.g., position, physical description) whose work or self-reflection is portrayed.

Consider what students understand and do well, and where they continue to struggle (e.g., common errors, confusions, need for greater challenge).
2. Feedback to Guide Further Learning

Refer to specific evidence of submitted feedback to support your explanations.

a. Identify the format in which you submitted your evidence of feedback for the 3 focus students. Choose one of the following:
   - Written directly on work samples or in separate documents that were provided to the focus students
   - In audio files
   - In video clip(s) from Instruction Task 2 (provide a time-stamp reference) or in separate video clips

If a video or audio clip of feedback occurs in a group context (e.g., discussion), clearly describe how the scorer can identify the focus student (e.g., position, physical description) who is being given feedback.

b. Explain how feedback provided to the 3 focus students addresses their individual strengths and needs relative to the learning target(s) measured.

c. Describe how you will support each focus student to understand and use this feedback to further their learning related to learning target(s), either within the learning segment or at a later time.

3. Evidence of Language Understanding and Use

When responding to the prompt below, use concrete examples from the video clip(s) and/or student work samples as evidence. Evidence from the clip(s) may focus on one or more students.

You may provide evidence of students' language use from ONE, TWO, OR ALL THREE of the following sources:

1. Use video clip(s) from Instruction Task 2 and provide time-stamp references for evidence of language use.

2. Submit an additional video file named “Language Use” of no more than 5 minutes in length and cite language use (this can be footage of one or more students' language use). Submit the clip in Assessment Task 3, Part B.

3. Use the student work samples analyzed in Assessment Task 3 and cite language use.

a. Explain and provide concrete examples for the extent to which your students were able to use or struggled to use the
   - selected language function,
   - vocabulary and/or symbols, AND
   - discourse or syntax
   to develop content understandings.
4. Using Assessment to Inform Instruction

a. Based on your analysis of student learning and student self-reflections presented in prompts 1b–e, describe next steps for planning and instruction to impact student learning:
   - For the whole class
   - For the 3 focus students and other individuals/groups with specific needs

Consider the variety of learners in your class who may require different strategies/support (e.g., students with IEPs or 504 plans, English language learners, struggling readers, underperforming students or those with gaps in academic knowledge, and/or gifted students needing greater support or challenge).

b. Provide a rationale for how these next steps follow from your analysis of student learning and student self-reflections. Support your explanation with principles from research and/or theory.

c. Identify any proposed revisions in tools/strategies for collecting what students thought they did well and/or needed to improve (student voice), providing a rationale for why revisions were or were not needed.

How Will the Evidence of My Teaching Practice Be Assessed?

For Assessment Task 3, your evidence will be assessed using rubrics 11–15, which appear on the following pages, and Student-Voice Rubric 18, which appears after Rubric 17. When preparing your artifacts and commentaries, refer to the rubrics frequently to guide your thinking, planning, instruction, assessment, and writing.
Rubric 11: Analysis of Student Learning

How does the candidate analyze evidence of student learning of conceptual understanding, procedural fluency, and mathematical reasoning or problem-solving skills?

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>

Professional Responsibilities

Refer to the following table for an overview of your professional responsibilities in developing evidence for edTPA. If you are submitting artifacts and commentaries for official scoring, refer to www.edTPA.com for complete and current information before beginning your work. Included here are important information and policies such as submission requirements and deadlines, registration agreements, attestations, permissions, and confidentiality. Whether or not you are submitting for official scoring, you should fulfill the professional responsibilities described below.

Responsibility | Description
--- | ---
Protect confidentiality | To protect confidentiality, please remove your name and use pseudonyms or general references (e.g., “the district”) for your state, school, district, and cooperating teacher. Mask or remove all names on any typed or written material (e.g., commentaries, lesson plans, student work samples) that could identify individuals or institutions. During videorecording, use students’ first names only.
To ensure confidentiality of your students and yourself, do not share your video on any publicly accessible platforms or websites (YouTube, Facebook, etc.).

Acquire permissions | Before you record your classroom instruction, ensure that you have the appropriate permission from the parents/guardians of your students and from adults who appear in the videorecording. Your program will provide you with procedures and necessary forms to obtain these permissions, according to agreements with the school or district in which you are student teaching or completing your internship.
If your program does not provide the necessary forms, you may refer to the sample forms found on www.edTPA.com.
The release forms are not to be submitted with your materials, but you should follow your campus policy for retaining them.

Cite sources | Provide citations for the source of all materials that you did not create (e.g., published texts, websites, and material from other educators). List all citations by lesson number at the end of the Planning Commentary. Note: Citations do not count toward the commentary page limit.

Align instruction with state standards | As part of the assessment, you will document the alignment of your lesson plans with state-adopted academic content standards that are the target of student learning. Refer to the Office of the Superintendent of Public Instruction website for your state to obtain copies of relevant standards for this assessment.

Follow the guidelines for candidate support at www.edTPA.com | Follow the guidelines for candidate support found at www.edTPA.com as you develop your evidence for edTPA. Although you may seek and receive appropriate support from your university supervisors, cooperating/master teachers, university instructors, or peers during this process, the ultimate responsibility for completing this assessment lies with you. Therefore, when you submit your completed work, you must be able to confirm your adherence with certain statements, such as the following:
- I have primary responsibility for teaching the students/class during the learning segment profiled in this assessment.
- I have not previously taught this learning segment to the students/class.
- The video clips submitted are unedited (continuous) and show me teaching the students/class profiled in the evidence submitted.
- The student work included in the documentation is that of my students, completed during the learning segment documented in this assessment.
- I am author of the commentaries and other written responses to prompts in this assessment.
- Appropriate citations have been made for all materials in the assessment whose sources are from published text, the Internet, or other educators.
Elementary Mathematics Context for Learning Information

Use the Context for Learning Information to supply information about your school/classroom context.

About the School Where You Are Teaching

1. Where is the school where you are teaching located? (Type an “X” next to the appropriate description.)
   - City: _____
   - Suburb: _____
   - Town: _____
   - Rural: _____

2. What grade levels are at your school site (e.g., K–6)?

3. List any special features of your school or classroom setting (e.g., charter, co-teaching, themed magnet, classroom aide, bilingual, team taught with a special education teacher) that will affect your teaching in this learning segment.

4. Describe any district, school, or cooperating teacher requirements or expectations that might affect your planning or delivery of instruction, such as required curricula, pacing plan, use of specific instructional strategies, or standardized tests.

About the Class Featured in this Learning Segment

1. How much time is devoted each day to mathematics instruction in your classroom?

2. Is there any ability grouping or tracking in mathematics? If so, please describe how it affects your class.

3. Identify any textbook or instructional program you primarily use for mathematics instruction. If a textbook, please provide the title, publisher, and date of publication.

4. List other resources (e.g., electronic whiteboard, manipulatives, online resources) you use for mathematics instruction in this class.

---

7 If you need guidance when making a selection, reference the NCES locale category definitions (https://nces.ed.gov/surveys/ruraled/definitions.asp) or consult with your placement school administrator.
About the Students in the Class Featured in this Learning Segment

1. Grade level(s): ________________________________

2. Number of
   - students in the class: _____
   - males: _____ females: _____

3. Complete the charts below to summarize required or needed supports, accommodations, or modifications for your students that will affect your instruction in this learning segment. As needed, consult with your cooperating teacher to complete the charts. Some rows have been completed in italics as examples. Use as many rows as you need.

Consider the variety of learners in your class who may require different strategies/supports or accommodations/modifications to instruction or assessment. For example, students

- With Individualized Education Programs (IEPs) or 504 plans
- With specific language needs
- Needing greater challenge or support
- Who struggle with reading
- Who are underperforming students or have gaps in academic knowledge

For Assessment Task 3, you will choose work samples from 3 focus students. At least one of these students must have a specified learning need.
### Students with IEPs/504 Plans

<table>
<thead>

## Elementary Mathematics for Washington Evidence Chart

Your evidence must be submitted to the electronic portfolio management system used by your teacher preparation program. Your submission must conform to the artifact and commentary specifications for each task. This section provides instructions for all evidence types as well as a description of supported file types for evidence submission, number of files, response lengths, and other information regarding format specifications. Note that your evidence cannot contain hyperlinked content. Any web content you wish to include as part of your evidence must be submitted as a document file, which must conform to the file format and response length requirements. If you have materials in languages other than English or Spanish, these must be translated into English as per the edTPA Submission Requirements. Those translations should be added to the original materials as part of the same file or, if applicable, to the end of the commentary template. There is no page limit for required translations into English.

<th>Response Length</th>
<th>Additional Information</th>
</tr>
</thead>
</table>
| Part A: Video Clips | flv, asf, qt, mov, mpg, mpeg, avi, wmv, mp4, m4v | 1-3 | No more than 15 minutes total running time (but not less than 3 minutes) | - Before you record your video, obtain permission from the parents/guardians of your students and from adults who appear on the video.  
- Refer to [Instruction Task 2, What Do I Need to Do?](#) for video clip content and requirements.  
- When naming each clip file, include the number of the lesson shown in the video clip.  

**IMPORTANT:** If your tools and/or strategies to elicit student expression of the following are not evident in the selected video clip(s), submit an additional video clip with that focus:
- Understanding of the learning target and why it is important  
- Understanding of what they are doing well and what they need to improve to reach the learning target (if this is done through a written tool for the lesson(s) seen in the clip(s), just describe the tool in the commentary) |

---

8 Video file size requirements: The target file size is 200–300 MB or less. The Pearson ePortfolio System file size limit is 500 MB. Please note that each integrated platform provider portfolio system may have additional constraints or requirements regarding video formats and file sizes. You may need to use video tools to compress or transcode your video into smaller file sizes to facilitate uploading of the video. Refer to Recommended Video Formats and Settings on [www.edtpa.com](http://www.edtpa.com) for the current requirements.

| Part E: Student Self-Reflections | For written self-reflections: .doc; .docx; .odt; .pdf  
For video self-reflections: .flv, .asf, .qt, .mov, .mpg, .mpeg, .avi, .wmv, .mp4, .m4v | 0 | 3 | No more than 5 minutes per focus student for video self-reflections |

- Use correction fluid, tape, or a felt-tip marker to mask or remove students’ names, your name, and the name of the school before copying/scanning written self-reflections. If your students’ writing is illegible, please write a translation directly on the self-reflection.
- On each self-reflection, indicate the student number (Student 1 Self-Reflection, Student 2 Self-Reflection, or Student 3 Self-Reflection). If more than one focus student appears in a video self-reflection, upload the same self-reflection separately for each focus student who is seen and label appropriately. Describe how to recognize each of the focus students in the clip and provide the label associated with the clip in prompt 1f of the Assessment Commentary.
- When naming each student self-reflection file, include the corresponding student number.
- If you submit a self-reflection as a video clip and there are audio portions that cannot be clearly heard, do one of the following: 1) attach a transcription of the inaudible comments (no more than 2 additional pages) to the end of the Assessment Commentary; 2) embed quotes with time-stamp references in the commentary response; or 3) insert captions in the video (captions for this purpose will be considered permissible editing).

**IMPORTANT:** Do not submit an additional file for Part E if student self-reflections are embedded in the student work samples from Part A.

---

**Video file size requirements:** The target file size is 200–300 MB or less. The Pearson ePortfolio System file size limit is 500 MB. Please note that each integrated platform provider portfolio system may have additional constraints or requirements regarding video formats and file sizes. You may need to use video tools to compress or transcode your video into smaller file sizes to facilitate uploading of the video. Refer to Recommended Video Formats and Settings on [www.edtpa.com](http://www.edtpa.com) for the current requirements.
Elementary Mathematics for Washington
Glossary

Source citations for glossary entries are provided as footnotes in this section.

academic language: Oral and written language used for academic purposes. Academic language is the means by which students develop and express content understandings. Academic language represents the language of the discipline that students need to learn and use to participate and engage in the content area in meaningful ways. There are language demands that teachers need to consider as they plan to support student learning of content. These language demands include language functions, vocabulary, discourse, and syntax.

- language demands: Specific ways that academic language (vocabulary and/or symbols, functions, discourse, syntax) is used by students to participate in learning tasks through reading, writing, listening, and/or speaking to demonstrate their disciplinary understanding.

- language functions: The content and language focus of the learning task, represented by the active verbs within the learning outcomes. Common language functions in mathematics include describing mathematical phenomena, predicting from models and data, comparing based on common attributes, summarizing mathematical information, recording multiple ways to solve problems, justifying conclusions, evaluating data and mathematical representations, classifying based on attributes, explaining how or why certain strategies work, drawing conclusions based on data, representing mathematical information, and so on. Some specific mathematics verbs are non-examples of language functions because they focus on a mathematical action, not a language-based action. Examples of mathematical functions that ARE NOT language functions include solving problems, simplifying the expressions, calculating the answers, and estimating the answers.

- vocabulary: Includes words and phrases that are used within disciplines including: (1) words and phrases with subject-specific meanings that differ from meanings used in everyday life (e.g., table); (2) general academic vocabulary used across disciplines (e.g., compare, analyze, evaluate); and (3) subject-specific words defined for use in the discipline.

- discourse: Discourse includes the structures of written and oral language, as well as how students talk, write, and participate in knowledge construction in ways that are appropriate both to their development and to the discipline. Discipline-specific discourse has distinctive features or ways of structuring oral or written language.

---

structures) that provide useful ways for the content to be communicated.\textsuperscript{14} In mathematics, language structures include symbolic representations such as numbers, equations, and proofs (which can be translated into words), tables and graphs (which are shorthand language for summarizing complex sets of data), and narrative (e.g., explanations of problem solutions). If the function is to compare, then appropriate language forms could include Venn diagrams or pattern sentences such as, “The _____ is longer/larger/heavier than the ______.” If the function is to explain, then students might use sentence starters like “First, I…”, “Then I…” to structure the explanation, and use “Finally, I…” to signal the conclusion.

- **Syntax:** The set of conventions for organizing symbols, words, and phrases together into structures (e.g., sentences, graphs, tables).\textsuperscript{15}

- **Language supports:** The scaffolds, representations, and pedagogical strategies teachers provide to help learners understand, use, and practice the concepts and language they need to learn within disciplines (Santos, Darling-Hammond, Cheuk, 2012).\textsuperscript{16} The language supports planned within the lessons in edTPA should directly support learners to understand and use identified language demands (vocabulary and/or symbols, language function, and discourse or syntax) to deepen content understandings.

**Aligned:** Consistently addressing the same/similar learning outcomes for students.

**Analysis/analyze:** Analysis means to “break apart” and examine the pieces, trends, or patterns. Analysis depends on the interpretations the candidate makes of experience and examines why the elements or events of that experience are the way they are. Analysis must include an interpretation of the evidence submitted and conclusions based on evidence. It shows the scorer the thought processes the candidate used to arrive at the conclusions made about the learning segment. Analysis is called for when a prompt uses words such as how, why, or in what way(s).

**Analytical writing:** A type of writing used to review data or other evidence, with an interpretation of results supported by concrete evidence.

**Artifacts:** Authentic work completed by you and your students, including lesson plans, copies of instructional and assessment materials, video clips of your teaching, and student work samples and self-reflections. Artifacts are submitted as part of your edTPA evidence.

**Assessment (formal and informal):** “[R]efers to all those activities undertaken by teachers and by their students . . . that provide information to be used as feedback for both students and teachers to modify the teaching and learning activities.”\textsuperscript{17} Assessments provide evidence of students’ prior knowledge, thinking, or learning in order to evaluate what

students understand and how they are thinking at a given point in time for the purpose of promoting student learning. Informal assessments may include, for example, student questions and responses during instruction and teacher observations of students as they work or perform. Formal assessments may include, for example, quizzes, homework assignments, journals, projects, and performance tasks.

assets (knowledge of students):

- **personal**: Refers to specific background information that students bring to the learning environment. Students may bring interests, knowledge, mathematical dispositions, everyday experiences, family backgrounds, and so on, which a teacher can draw upon to support learning.
- **cultural**: Refers to the cultural backgrounds and practices that students bring to the learning environment, such as traditions, languages and dialects, worldviews, literature, art, and so on, that a teacher can draw upon to support learning.
- **community**: Refers to common backgrounds and experiences that students bring from the community where they live, such as resources, local landmarks, community events and practices, and so on, that a teacher can draw upon to support learning.

**central focus**: A description of the important understandings and core concepts that you want students to develop within the learning segment. The central focus should go beyond a list of facts and skills, align with content standards and one or more learning target(s), and address the subject-specific components in the learning segment. For example, the subject-specific components for elementary mathematics are conceptual understanding, procedural fluency, **AND** mathematical reasoning or problem-solving skills. A central focus for the elementary mathematics learning segment might be equivalent fractions or equivalencies. The learning segment would focus on conceptual understanding and the associated computational/procedural understandings **AND** reasoning or problem-solving skills.

**commentary**: Submitted as part of each task and, along with artifacts, make up your evidence. The commentaries should be written to explain the rationale behind your teaching decisions and to analyze and reflect on what you have learned about your teaching practice and your students’ learning. The commentaries will guide the scorers in interpreting the evidence submitted.

**communication**: Expression of understandings through oral, written, or nonverbal means, appropriate to the student’s developmental level and, if applicable, routine use of assistive communication technologies.

**conceptual understanding**: “Students demonstrate conceptual understanding in mathematics . . . when they recognize, label, and generate examples of concepts; use and interrelate models, diagrams, manipulatives, and varied representations of concepts; identify and apply principles; know and apply facts and definitions; compare, contrast, and integrate related concepts and principles; recognize, interpret, and apply the signs, symbols, and terms used to represent concepts.”

**description**: Used when stating, listing, or providing details that are accurate and precise enumeration and/or explanation; clear and logical ordering of the elements or features of the

---

event, person, concept, or strategy described; supporting features of elements that would allow an outsider to visualize whatever is provided as evidence.

**descriptive writing:** A type of writing used to state, list, or provide details so the scorer can visualize the features of an event, person, concept, or strategy. Descriptive writing sets the scene.

**engaging students in learning:** Using instructional and motivational strategies that promote students’ active involvement in learning tasks that increase their knowledge, skills, and abilities related to specific learning target(s). Engagement in learning contrasts with student participation in learning tasks where students complete the learning tasks but make little meaning because of the design and/or implementation of the task.

**evaluation criteria:** Performance indicators or dimensions that are used to assess evidence of student learning. They indicate the qualities by which levels of performance can be differentiated and that anchor judgments about the learner’s degree of success on an assessment. Evaluation criteria can be represented in various ways, such as a rubric, a point system for different levels of performance, or rules for awarding full versus partial credit. Evaluation criteria may examine correctness/accuracy, cognitive complexity, sophistication or elaboration of responses, or quality of explanations.

**evidence:** Tangible proof that verifies an intended outcome. In the context of the edTPA tasks, required assessment responses represent evidence that includes: description of the learning context, instructional plans, instructional materials, assessment tools, evaluation criteria, commentary, video clips, work samples, and oral and written feedback to students.

Evidence for edTPA consists of **artifacts** that document how you planned and implemented instruction **AND commentaries** that explain your plans and what is seen in the videorecording(s) or examine what you learned about your teaching practice and your students’ learning. Evidence should demonstrate your ability to design lesson plans with instructional supports that deepen student learning, use knowledge of your students to inform instruction, foster a positive learning environment that promotes student learning, monitor and assess student progress toward learning target(s), and analyze your teaching effectiveness. Your evidence must be submitted electronically using the electronic portfolio management system used by your teacher preparation program.

**learning environment:** The designed physical and emotional context, established and maintained throughout the learning segment to support a positive and productive learning experience for students.

**learning segment:** A set of 3–5 lessons that build one upon another toward a central focus, with a clearly defined beginning and end.

**learning target(s):** “[D]efines academic success, what we want students to know and be able to do.” Generally written in student-friendly language so the learner can articulate and demonstrate learning.

**learning task:** Purposefully designed activities in which students engage in learning—not just participate—to meet the lesson’s learning target(s). It includes activities, discussions, or

---

other modes of participation that engage students to develop, practice, and apply skills and knowledge related to a specific learning goal. Learning tasks may be scaffolded to connect prior knowledge to new knowledge and often include formative assessment. A sample mathematical learning task for fourth graders working with multi-digit numbers could be: Collect the population from 4 neighboring states to compare with our own state. Identify the state with the highest and lowest populations and make a table showing the states’ populations in order from highest to lowest populations. Compare the populations of the states by writing statements using <, =, and >.

**lesson plan:** A plan for student learning. Three to five lesson plans comprise a learning segment.

**mathematical reasoning:** “[T]he capacity to think logically about the relationships among concepts and situations. Such reasoning is correct and valid, stems from careful consideration of alternatives, and includes knowledge of how to justify the conclusions. One uses it to navigate through the many facts, procedures, concepts, and solution methods and to see that they all fit together in some way, that they make sense.”

**mathematical understandings:** Mathematical competencies (conceptual understanding and procedural fluency) develop through instruction of mathematical topics. Mathematical reasoning provides opportunities for students to develop and express insights about the mathematical competencies that they are developing. Problem solving allows students to draw on the competencies that they are developing to engage in a task for which the solution is not known.

**patterns of learning:** Includes both quantitative and qualitative patterns (or consistencies) for different groups of students or individuals. Quantitative patterns indicate in a numerical way the information understood from the assessment (e.g., 10 out of 15 students or 20% of the students). Qualitative patterns include descriptions of understandings, misunderstandings, and/or partial understandings that could explain the quantitative patterns (e.g., “given that most students were able to . . . it seems that they understand”).

**planned supports:** Instructional strategies, learning tasks and materials, and other resources deliberately designed to facilitate student learning of the central focus.

**prior academic learning and prerequisite skills:** Includes students’ content knowledge and skills as well as academic experiences developed prior to the learning segment.

**problem-solving skills:** Skills to “engag[e] in a task for which the solution method is not known in advance.”

**procedural fluency:** Procedural fluency is a critical component of mathematical proficiency. Procedural fluency is the ability to apply procedures accurately, efficiently, and flexibly; to transfer procedures to different problems and contexts; to build or modify procedures from other procedures; and to recognize when one strategy or procedure is more appropriate to apply than another. To develop procedural fluency, students need experience in integrating concepts and procedures and building on familiar procedures as they create their own
informal strategies and procedures. Students need opportunities to justify both informal strategies and commonly used procedures mathematically, to support and justify their choices of appropriate procedures, and to strengthen their understanding and skill through distributed practice.22

**rapport:** A close and harmonious relationship in which the people or groups understand each other’s feelings or ideas and communicate well with each other.

**representation:** The term representation refers both to process and to product—in other words, to the act of capturing a mathematical concept or relationship in some form and to the form itself. . . . Moreover, the term applies to processes and products that are observable externally as well as to those that occur “internally,” in the minds of people doing mathematics. All these meanings of representation are important to consider in school mathematics. (From National Council of Teachers of Mathematics [2000]. *Principles and Standards for School Mathematics*, p. 67)

**respect:** A positive feeling of esteem or deference for a person and specific actions and conduct representative of that esteem. Respect can be a specific feeling of regard for the actual qualities of the one respected. It can also be conduct in accord with a specific ethic of respect. Rude conduct is usually considered to indicate a lack of respect, *disrespect*, whereas actions that honor somebody or something indicate respect. Note that respectful actions and conduct are culturally defined and may be context dependent.

**rubrics:** Subject-specific evaluation criteria used to score your performance on edTPA. These rubrics are included in the handbook following the directions for each task. The descriptors in the five-level rubrics address a wide range of performance, beginning with the knowledge and skills of a novice not ready to teach (Level 1) and extending to the advanced practices of a highly accomplished beginner (Level 5).

**student voice:** Ongoing reflective self-assessment expressed in the words of the learner for the purpose of improving teaching and learning. Student voice is important evidence, in addition to student work, of student understanding of his/her own learning process and progress toward the learning target(s). Examples of student-voice evidence might include the following:

- Evidence that students know the learning target(s) and what is required to meet them.
  - Students explain the learning target(s) in their own words, written or oral, rather than as worded by the teacher.
  - Students express why the learning target(s) are important.
  - Students describe how they will demonstrate that they have reached the targets.
- Evidence that students know how to monitor their progress toward the learning target(s) using tools (checklists, rubrics, etc.).
  - Students know and discuss the progression of learning that guides their progress.
  - Students compare their work with a tool that clarifies the progression of learning.

---

22 From “Procedural Fluency in Mathematics”. Downloaded from [www.nctm.org](http://www.nctm.org) on February 9, 2016.
Students explain what they are doing well, what they need to improve, and what they need to do to make the identified improvements.

Evidence that students know how to access resources and additional support when needed.

Students articulate the range of resources available to them to help them reach the learning target(s).

Students explain how and why particular resources will help them reach the learning target(s).

tools and strategies for student-voice evidence: Tools and strategies for prompting students to communicate their understanding of either the learning targets or their own learning progress. Tools are artifacts (e.g., graphic organizers, rubrics, checklists). Strategies are plans or methods (e.g., routines for unpacking learning targets or self-monitoring of learning progress, peer review opportunities, teacher or peer feedback, letter to a younger student explaining a learning target) for eliciting student-voice evidence.

variety of learners: Students in your class who may require different strategies or support. These students include but are not limited to students with IEPs or 504 plans, English language learners, struggling readers, underperforming students or those with gaps in academic knowledge, and/or gifted students.
